# Grade 11 STEM - General Physics & OSR Reading Module

1. Optical Sign Recognition (OSR) and Photonic Energy

Photosynthesis and thermodynamics govern energy transformation in nature.
A cascade of luminescent photons excites electrons inside chloroplasts.
Resilient cellular metabolism sustains autotrophic organisms in ecosystems.

2. Assessment Questions Preview:
Q1: What process transforms solar radiation into chemical energy? (Photosynthesis)
Q2: Which organelle captures light energy in green plants? (Chloroplasts)
Q3: What term describes the network of chemical reactions sustaining life? (Metabolism)
